

ISSUES IDENTIFICATION DOCUMENT

HTML Issues

All 4 Pages (repeated on every file)

1. Missing lang="en" on <html> - screen readers cannot detect page language.
2. Missing <meta charset="UTF-8"> - character encoding undefined.
3. Missing <meta name="viewport"> -mobile layout broken.
4. Missing <meta name="description"> -accessibility.
5. <div class="header"> used instead of semantic <header>.
6. <div class="footer"> used instead of semantic <footer>.
7. No <main> element - missing ARIA landmark region.
8. No <nav> element - navigation not semantically marked.

index.html

9. Content sections used <div> instead of <section>.
10. No skip-to-main-content link for keyboard/screen reader users.

about.html

11. Table would need <thead>, <tbody>, <th scope>, and <caption>.
12. had no alt attribute.
13. Heading hierarchy jumped h2 → h3 skipping logical structure.

projects.html

14. All tags missing alt attributes.
15. Project blocks used <div> instead of semantic <article>.

contact.html

16. No <label> elements for any form inputs.
17. Email input used type="text" instead of type="email".
18. Only 2 input types (text, textarea) - needed 5+ types.
19. No HTML5 validation attributes (required, minlength, pattern).
20. No <fieldset> or <legend> for grouped inputs.

CSS Issues

21. Only 2–3 selector types used (element, class) - needed 5+.
22. No ID selectors.
23. No descendant selectors (e.g. nav ul li a).

24. No pseudo-class selectors (:hover, :focus, :nth-child).
25. No pseudo-elements (::before, ::after).
26. Navigation styling completely absent.
27. Table styling completely absent.
28. Form inputs only had display:block and margin - no visual styling.
29. footer had text-align: left - should be centered.
30. No :focus styles - keyboard navigation inaccessible.
31. CSS had minimal margin/padding/border - box model not demonstrated.
32. font-family: Arial declared with no proper fallback stack.
33. No transitions or hover effects on interactive elements.

Approach to Fixing

HTML: Replaced all structural <div> tags with semantic HTML5 elements (header, nav, main, section, article, footer). Added all missing meta tags, lang attributes, alt text, labels, and ARIA attributes. Built the complete skills table and third project. Rebuilt the form with input types and full validation. Added a skip link on every page.

CSS: Rewrote the stylesheet using CSS custom properties. Added selector types, :hover/:focus/:nth-child pseudo-classes. Demonstrated the box model explicitly. Added transitions, animations, table alternating rows, form focus glow, and navigation active states. Added 16 meaningful section comments with logical organisation.

Additions beyond requirements: Bootstrap 5 utility reset, certifications section with 5 certificate cards, hero section with professional photo, and responsive breakpoints for mobile.
